

**HUBER &
RANNER**

EXPECT MORE.

THE COMPANY

EXPECT MORE

For making a tribute to customers succes it is necessary to know them well.

Geographically speaking, our presence gives us proximity to our customers, their markets and their specific requirements. Still, it is our employees who ensure that, wherever in the world we get to know these in depth and work to understand their problems better. Our employees delve deeply into industries, products and applications; their thoughts accompany and anticipate. In doing so, they are supported by a corporate culture that promotes, stimulates and motivates a high level of personal responsibility.

Communication at all levels

Only communication between all who are involved can create the pre-conditions for the implementations of ideas. That is why this subject is so important to us. Just as important as the quality of our products and the systems we use to create magnificent huge AHU`s-together with you.

- planning with us: you gain freedom whilst concentrating on the core of your work
- construction with us: your processes will be supervised by experts
- after sales by us: you can budget with precision, as the costs are transparent at all times

REQUIRED STANDARD

Air handling unit competence

Quality

Our customers are the ones who define what quality is. Quality can be broken down into fitness for purpose and reliability of our products, technical support, delivery services as well as other services which we provide with regard to our customer's issues. The demands and requirements in this respect are subject to constant change. So it is not enough to merely meet minimum standards. Whilst simultaneously providing for further enhancements of existing products, we are aiming at continuous quality improvements.

Durable

Our products are built for continuous use, which reflects our quality philosophy. The solid construction of our plants and devices is a good reason to choose a product made by Huber & Ranner.

Flexible

Each of our products is adapted to your individual requirements and needs. Due to an ingenious concept of variants and custom-made product we are able to meet your requirements exactly. Enclosure of columns? Shifting the charging doors because of structural conditions? These cases are daily business for Huber & Ranner.

Uncomplicated to maintain

The ventilation systems and climatic master devices of the Huber & Ranner GmbH do not only convince by their performance and productivity but are also very easy to handle. And in addition the maintenance process is very uncomplicated because those elements, that have to be maintained regularly, are simply accessible.

COMBINING COMPETENCIES

performance, teamwork, responsibility.

performance

The general success of Huber & Ranner is made up of the performances and successes of the individual employees. They consider themselves part of a team: together we celebrate success, enjoy our work and learn from our failures. We expect highly professional involvement from our employees but at the same time we emphasize cooperation. We support all activities which bring us even closer together.

teamwork

We insist on quick decision-making and a lack of bureaucracy and on customer satisfaction! Only with close cooperation and teamwork of our employees, we are able to react to the various requirements of our customers fast and flexibly.

responsibility

Each individual employee bears responsibility for the manufactured products and for their working performance. Exactly for this reason our customers can expect the best from us.

HUBER & RANNER

Feel the difference?

Our ventilation and air conditioning systems are unique. The special about our devices is the particularly durable tread frame construction that allows highest inherent stability. The advantages of the flexible modular construction are the enormous logistical easement especially in case of transporting large AHU plants.

A fast and uncomplicated local erection, where only modules have to be coordinated accurately, are guaranteed.

A further advantage is the flexibility in relation to the requirements and desires of our customers, since the composition of single modules permits us a individual adjustment of our devices to the requirements and conditions of the premises of our customers.

„New chapters are being added to the book of AHU`s - every day and by us all.“

Dietmar Huber / Udo Ranner

VALIDATION SERVICE

This is how we serve you today.

From initial system evaluation, design to fabrication, testing through to installation and continued support, Huber & Ranner takes single-source responsibility for every system we produce. This approach circulates through the design and execution of a peak performance system specific to your application and is rounded out by ongoing product support.

INCREASING REQUIREMENT, INCREASING KNOW-HOW

You have to rely on it day by day!

You rely on ventilation and air conditioning systems day by day? If this is the case, with Huber & Ranner you are in good hands.

Just make use of a wide range of services. Ask our competent service team for consultation in respect of a service package tailored to your special needs. Your individual wishes and requirements have highest priority for us.

The design of our custom made AHUs is based on the knowledge we gained through the long years experience and research.

Huber & Ranner's customer service is to provide a detailed response to your post-installation needs. We provide all our services for the life of your system.

“Our quality, high efficiency products are only a portion of the Huber & Ranner advantage. Ongoing support brings the process full circle. Who can do a better job of servicing your custom air handling unit than the people who built it.
